Agenda

Real Time Data Platform – SAP HANA

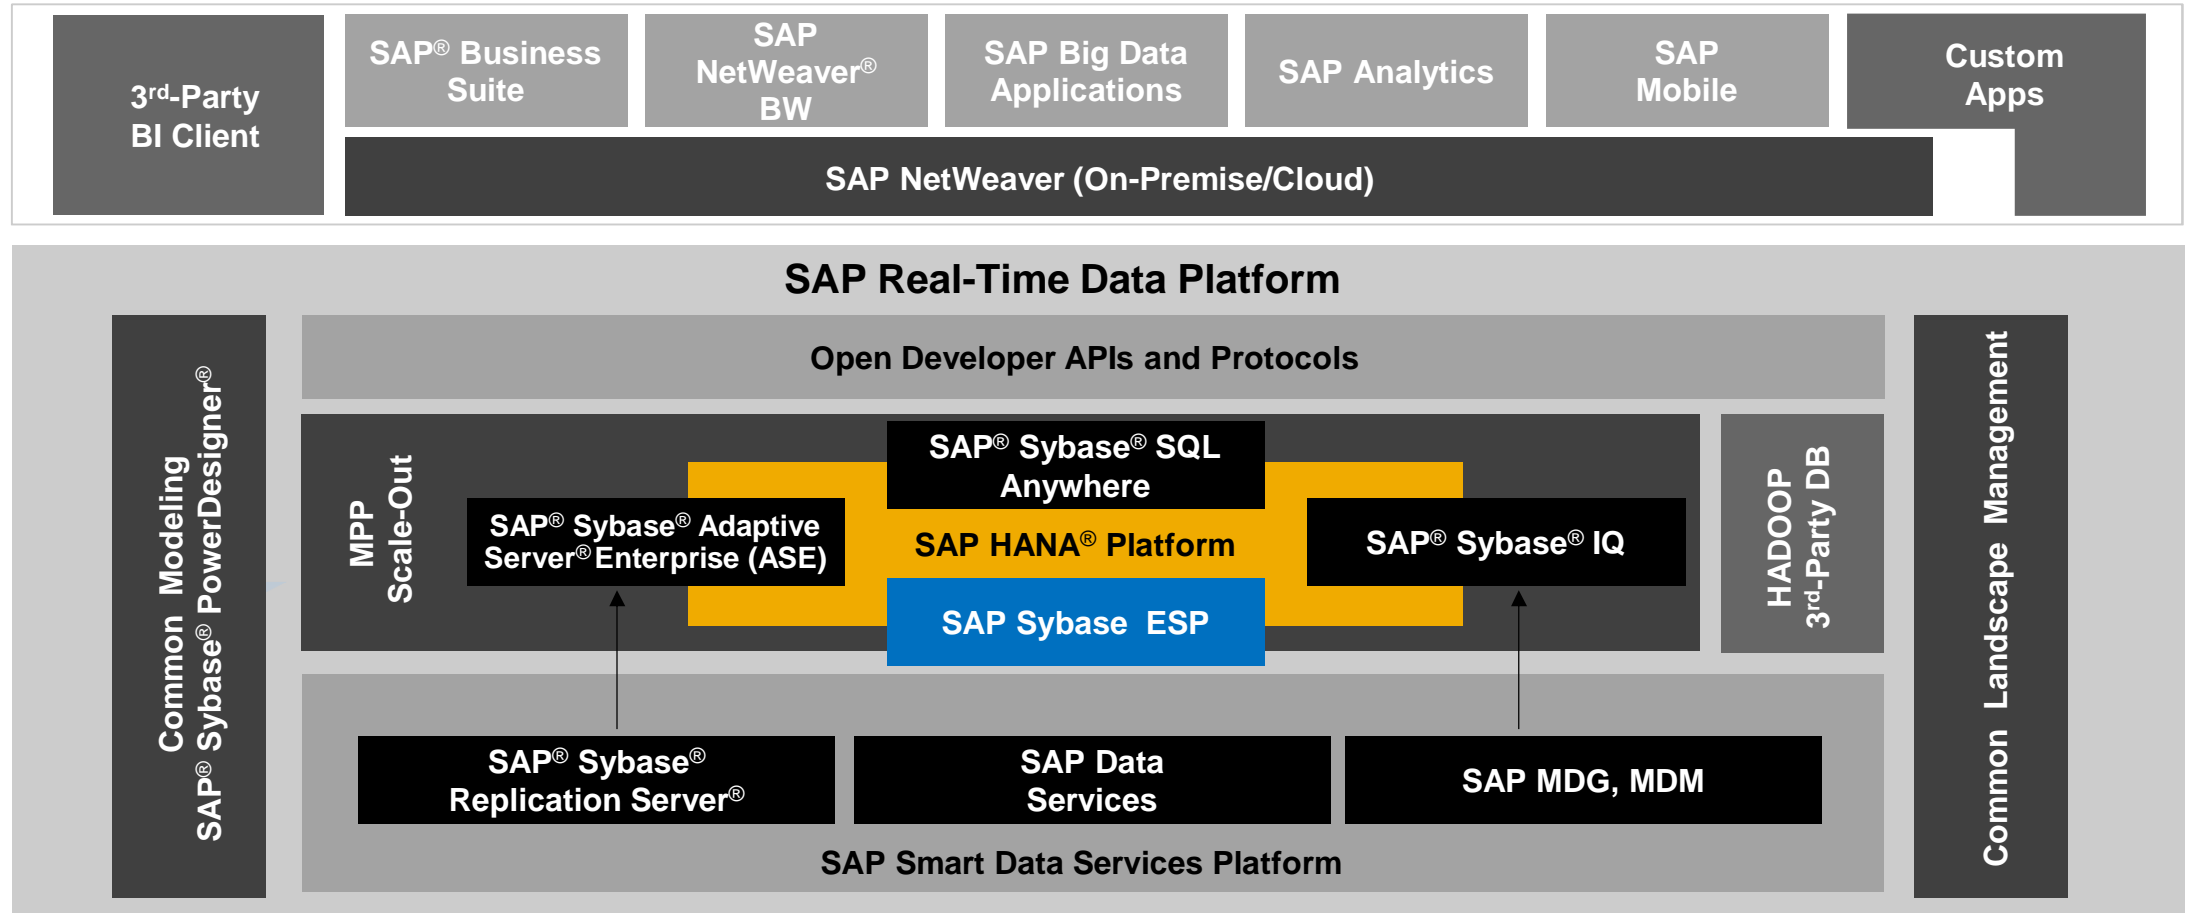

Data Provisioning with SAP HANA - Options

- **SAP LT Replication Server (Real Time)**
- **SAP Sybase Replication Server (Real Time)**
- **SAP Data Services 4.1 (Batch)**
- **SAP Sybase Event Stream Processor 5.1 (Real Time)**
- **Other Data Provisioning - Options**
- **3rd Party Integration - SAP HANA Certification.**

Demo

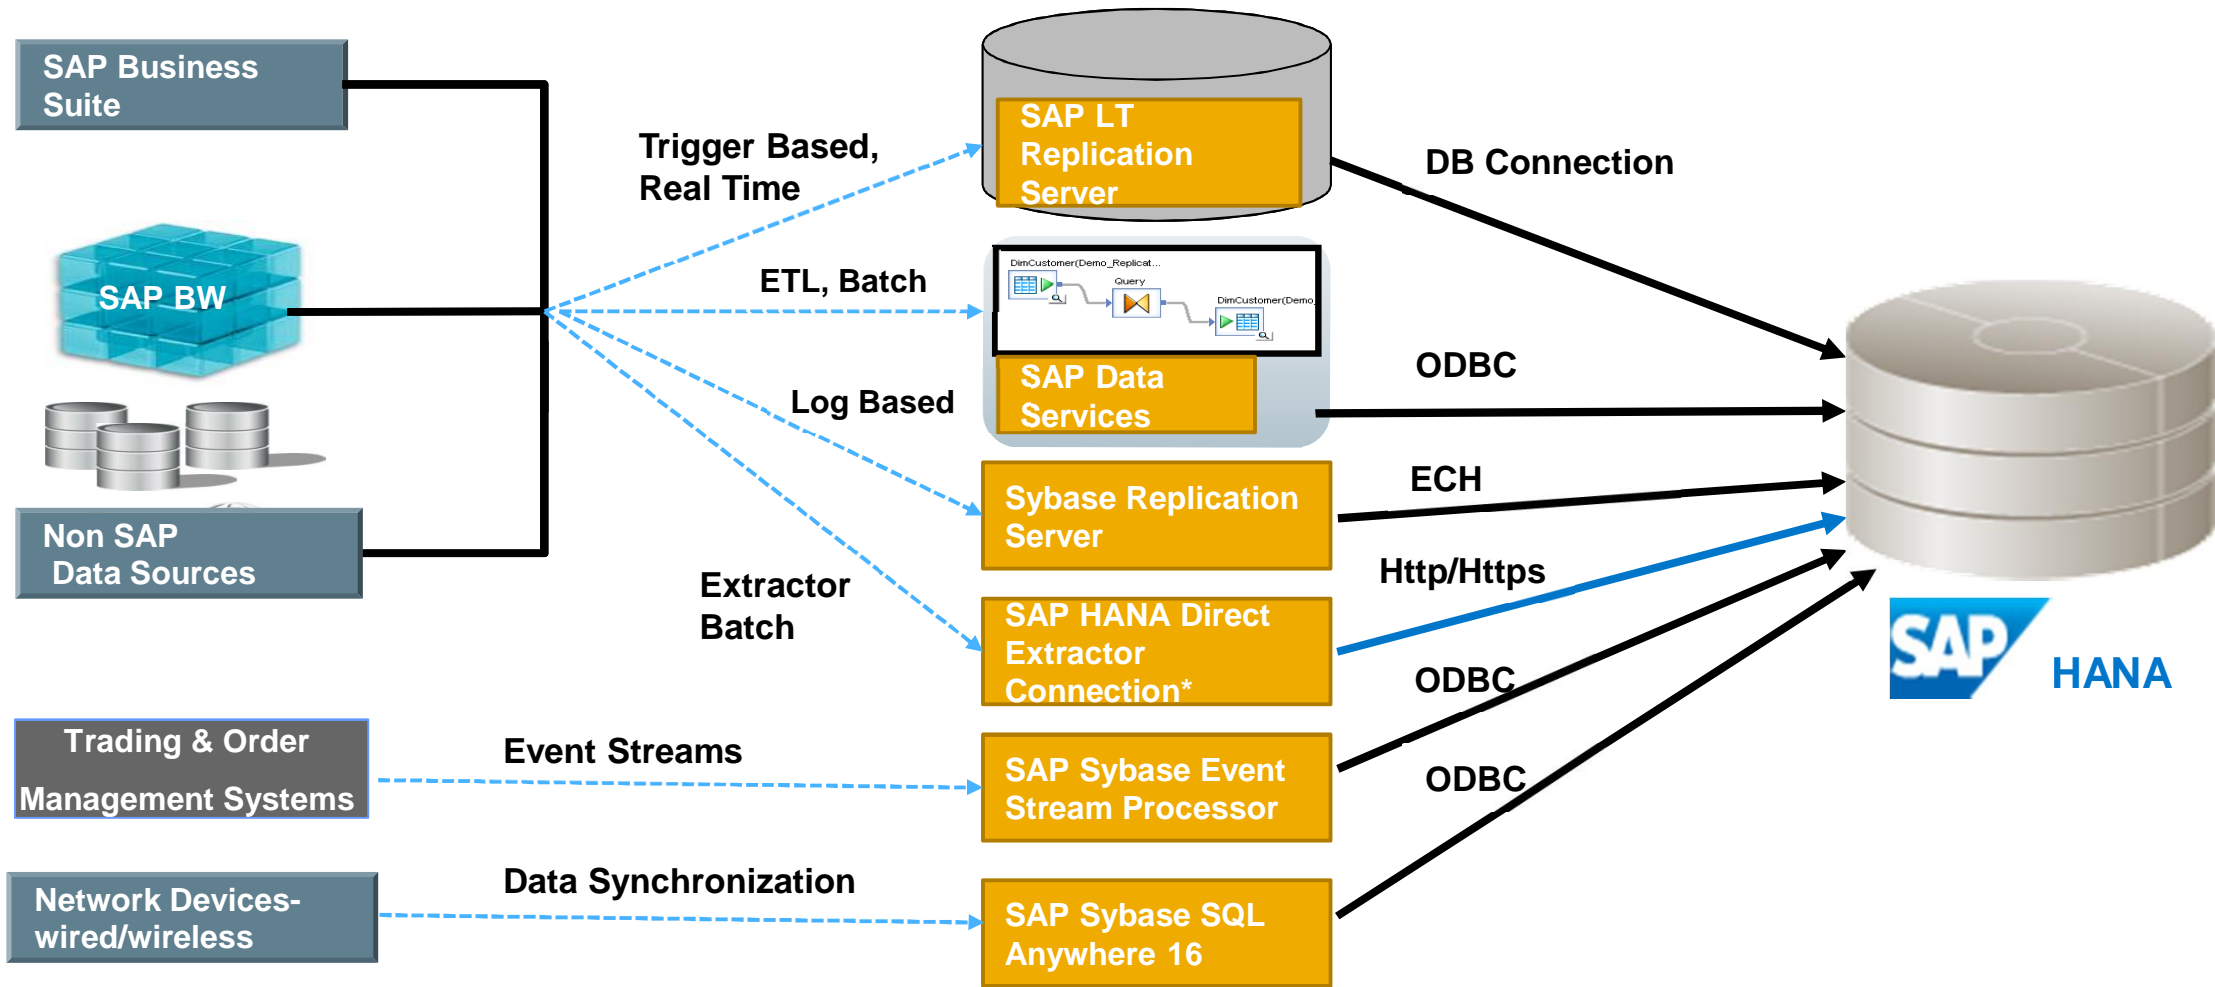

Key Takeaways

Real Time Data Platform – SAP HANA

SAP innovation without customer disruption

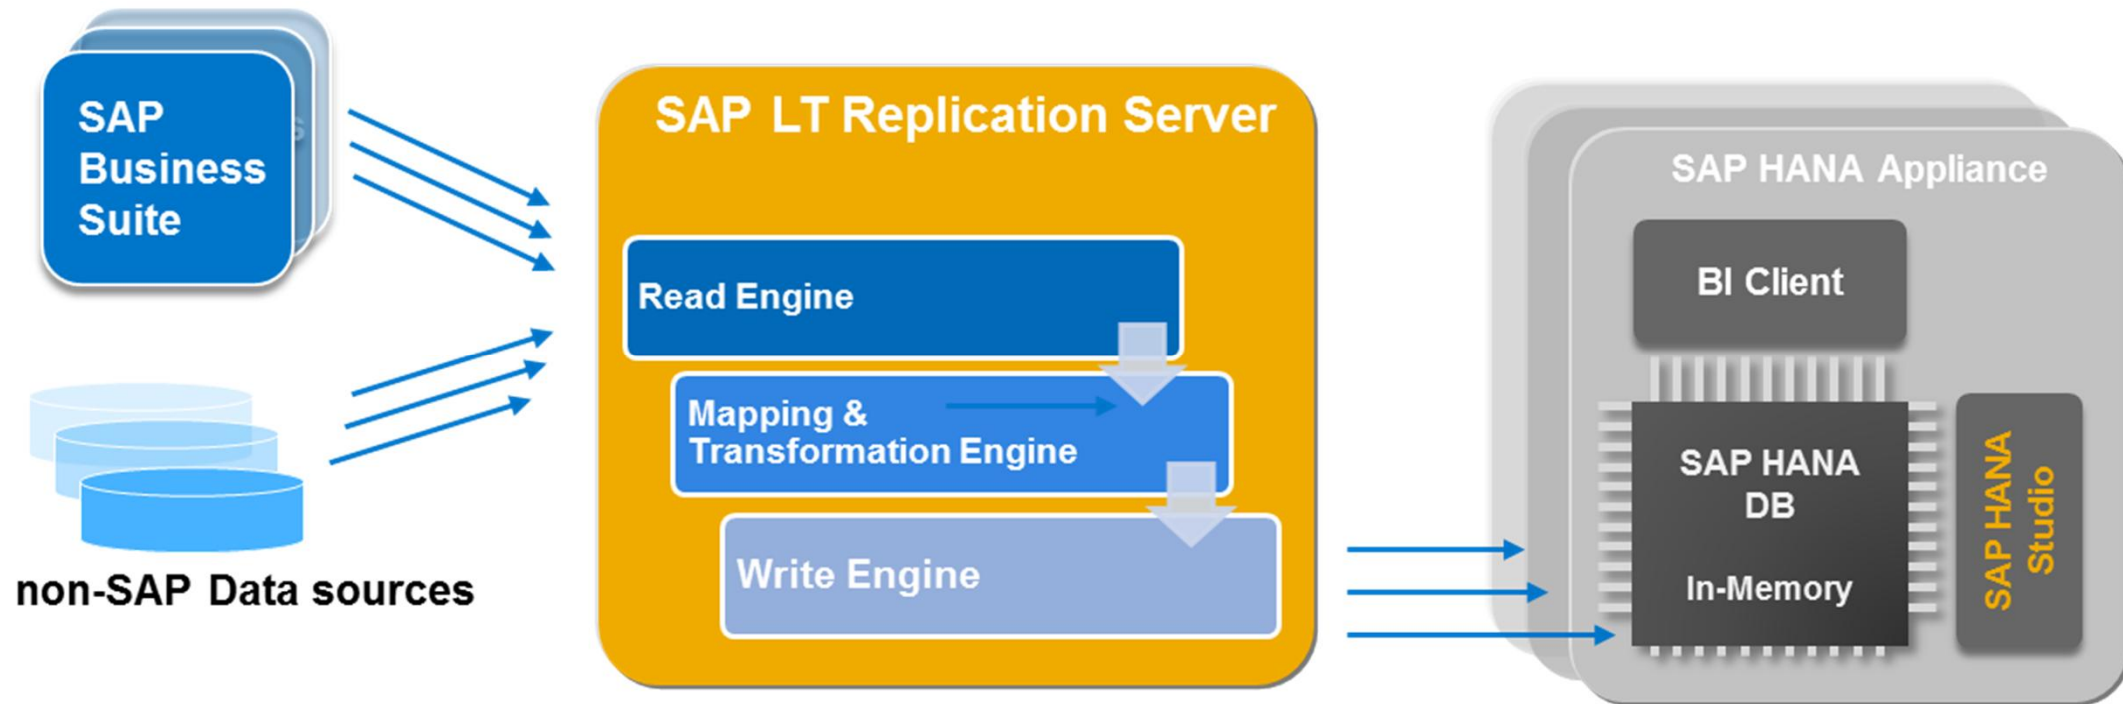

Data Provisioning with SAP HANA 1.0 - Options

Data Sources

* SAP ERP & BW Extractors

1. SAP LT Replication Server

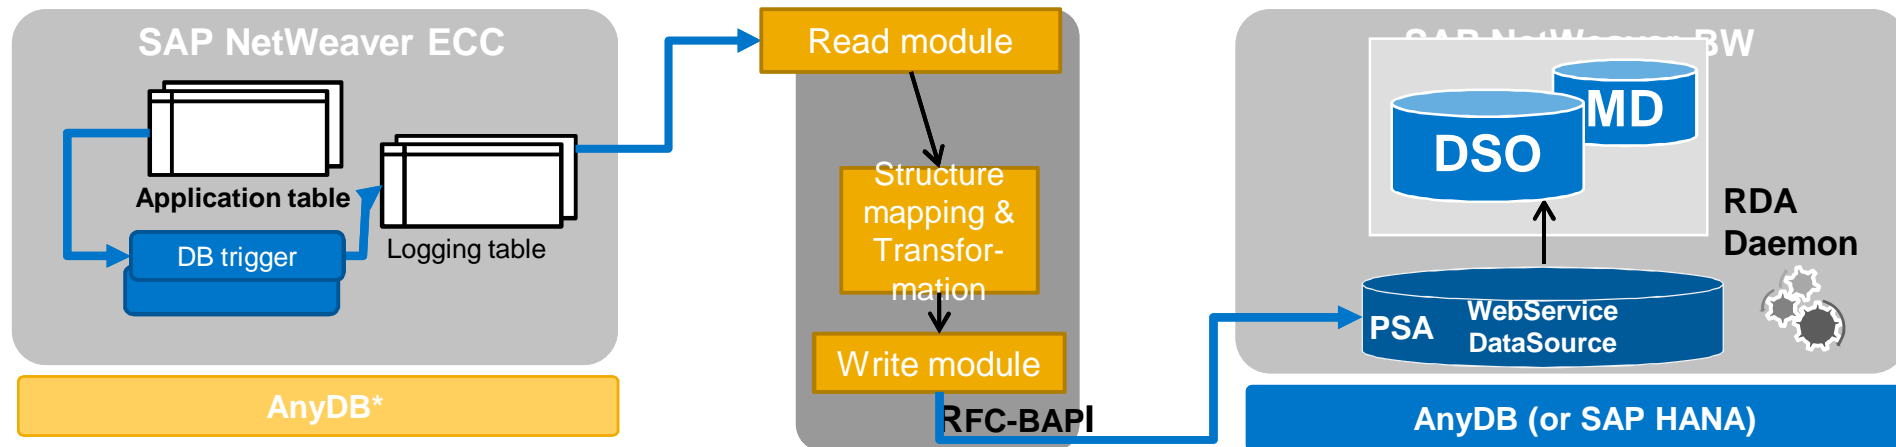

SAP LT Replication Server is the real time data provisioning (Trigger Based) for extracting and loading data into SAP HANA

SAP LT Replication Server- Replication into SAP BW

Replication into a BW Data Source

Overview

- Data replication from SAP and non SAP systems into SAP NW BW 7.0 (onwards) possible with **SAP Landscape Transformation Replication Server** (SLT)
- Real-Time data processing via SAP BW Real time Data Acquisition (RDA) Daemon into a DataStore Object (DSO) or master data tables (MD)
- Recommended for simple tables (no join or transformation logic included) and data sources (extractors) without delta mechanism and complex business logic
 - via Persistent Staging Area (PSA) / Web Service Data Source: -> all BW customers (but rather not preferred option for BW on HANA)
 - via HANA DB schema / view – Virtual Provider or Transient Provider: -> BW on HANA customers only!

* Including non-SAP sources replication for SAP supported DB versions as well!

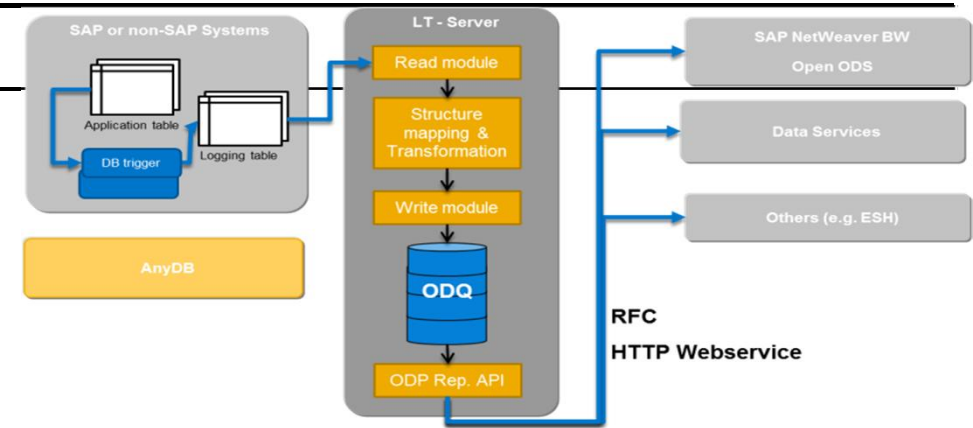

SAP LT Replication Server Road map at a glance (planned innovation & future direction)

SAP LT Replication Server

**Planned:
Upcoming 'Release'
(DMIS 2011 SP5)**

Feature

- **New Features**
 - ODQ - Operational Delta Queue
- **Technical Readiness**
 - HR Data Tables (HR Cluster tables)
 - Redesign: Handling of non-SAP data sources and targets
- **Improved Usability & Stability**
 - in total a more than 50 person day Investment, i.e.:
 - LTR Configuration UI will be redesigned:
 - Guided Procedure with build-in check after each input section (data source, target, configuration parameters)

**Planned:
Future ,Release'
(DMIS 2011 SP6)**

- **New Scenario/Use Case:**
 - 1:N data distribution scenario for non-SAP Data Sources, too
 - 'Heterogeneous warm Standby'
 - Replication to other target DBs (as project solution only!)
- **Technical Readiness**
 - Support of 'Point-in-Time Restore of Replication Landscape' – Scenario

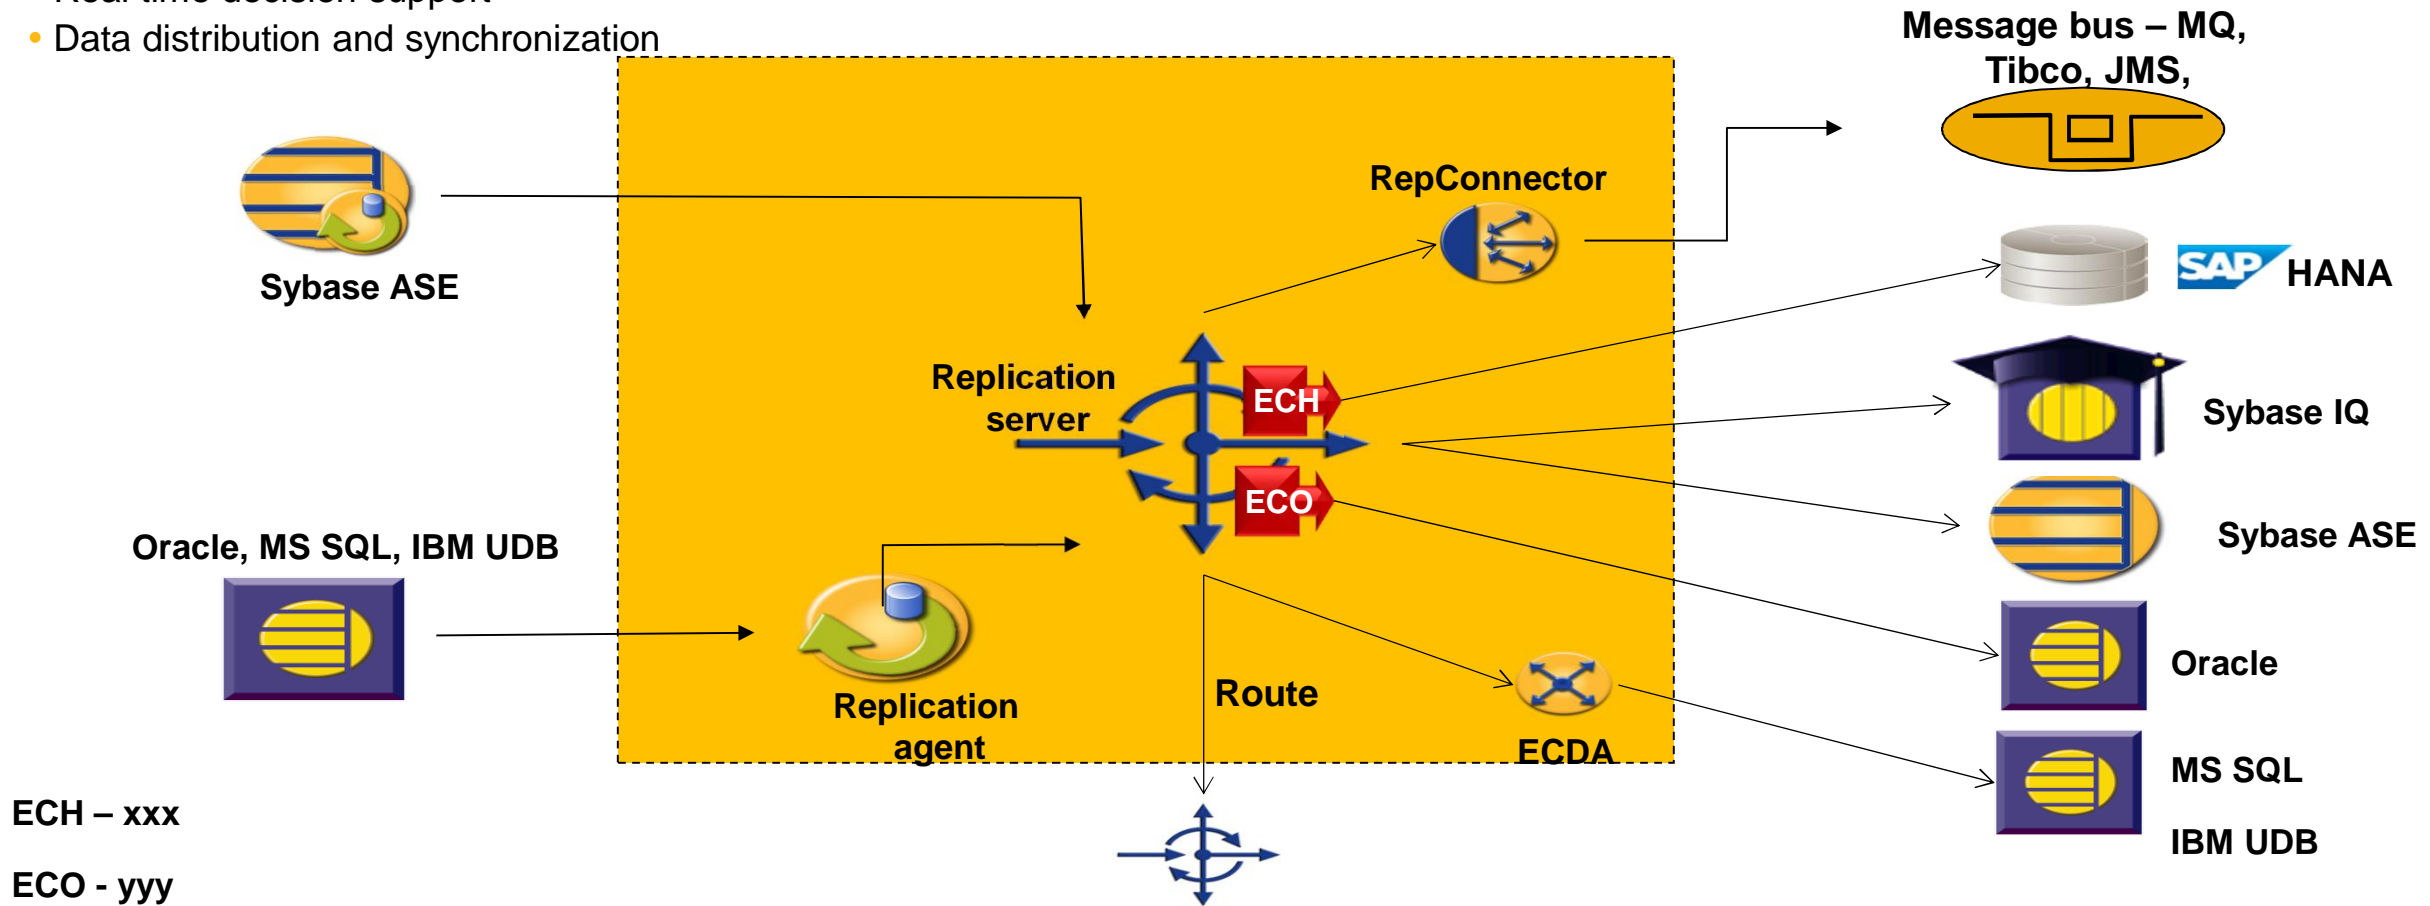

PLANNED INNOVATIONS, FUTURE DIRECTION

This is the current state of planning and may be changed by SAP at any time.

2. SAP Sybase Replication Server

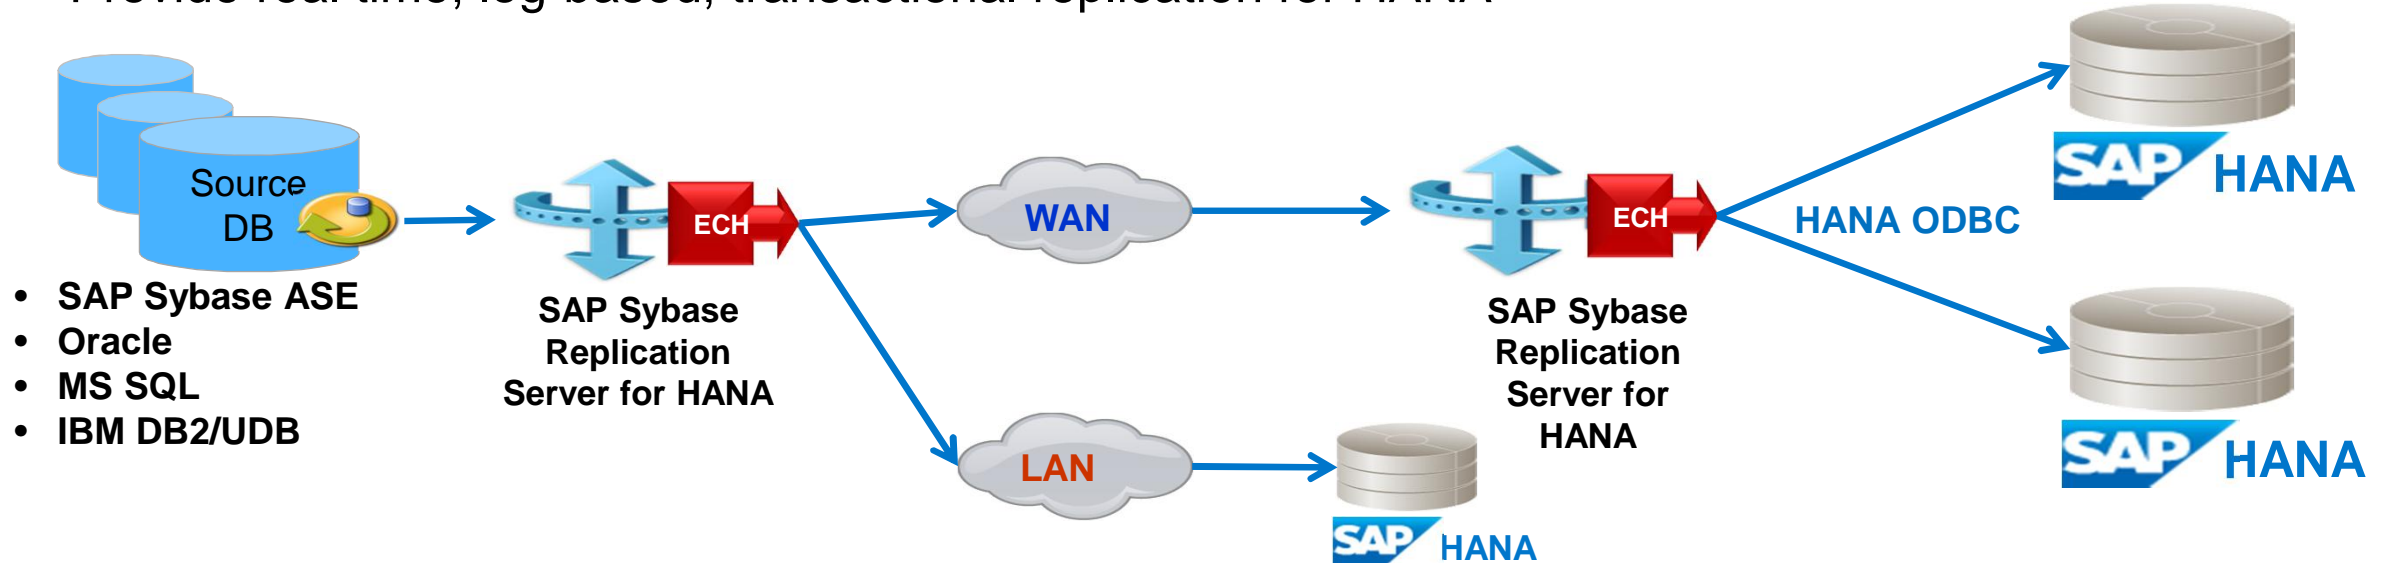

SAP Sybase Replication Server (SRS) performs real-time data movement to provide:

- High availability/disaster recovery for databases
- Real time decision support
- Data distribution and synchronization

SAP Sybase Replication Server Support for SAP HANA

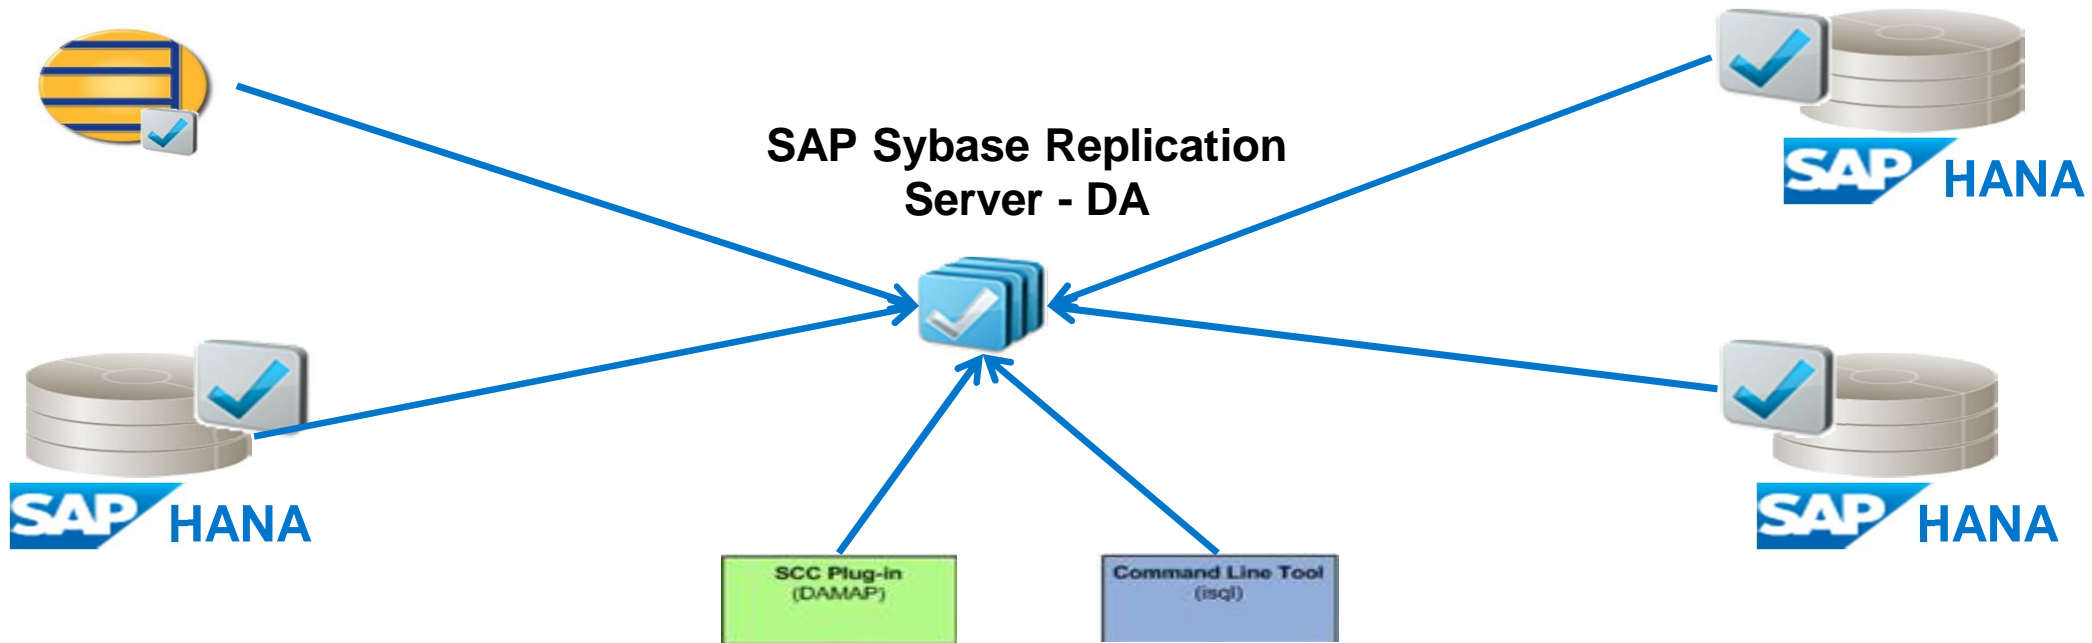

- Provide real time, log-based, transactional replication for HANA

1. **Log-based Heterogeneity support**
 - a) Supports Log-based ASE, Oracle, MS SQL and IBM DB2/UDB replication for low-impact and non-intrusiveness of production system
2. **Express Connector for HANA (ECH)**
 - a) SRS dynamically loads ECH library with SAP HANA ODBC driver to leverage native HANA bulk capability for better performance
3. **Heterogeneous materialization**
4. **Preserve Transactional Consistency**
5. **Flexible Deployment topology**
6. **Data Assurance support**

Data Assurance (DA) for SAP HANA

- Ensure data consistency between sources and HANA targets
- Highly scalable and can be deployed flexibly to meet high performance and complex topology requirements

This is the current state of planning and may be changed by SAP at any time.

SAP Sybase Replication Server -High availability/disaster recovery

Minimize/eliminate user impact

Protect against unplanned outages

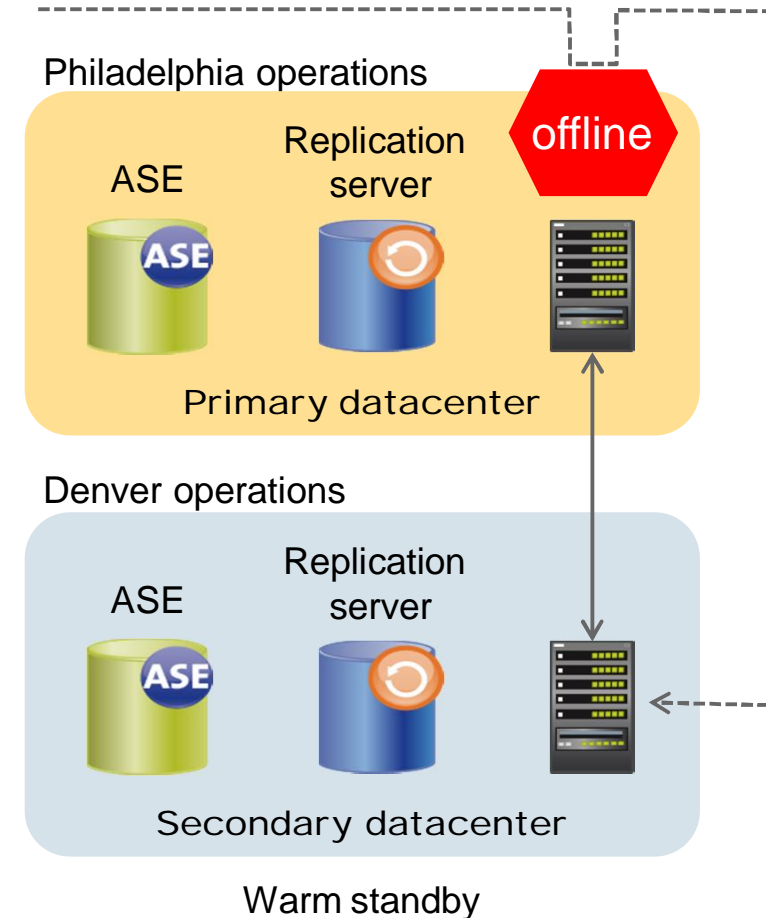

- Software, hardware, application failure
- Unforeseen circumstances like data corruption

Protect against planned outages

- Software, hardware, application upgrades
- Enable ops to perform maintenance activities

Recover from natural disaster

- Without geographic restrictions

SAP Sybase Replication Server

Product road map overview - key themes and capabilities

ASE 15.7 ESD#1 support

- Support ASE 15.7 ESD#1 features
- Heterogeneous and homogeneous MPR replication
- Replication server performance
- Usability improvements
- Enhanced Oracle replication (compression and encryption)
- DB2 v9.7 support

Today

(Release 15.7.1 – Q2 2012)

See Appendix for abbreviations

SAP Business Suite support & SAP HANA replication

- Integrated RS and ASE for Business Suite
- DR support for SAP Business Suite/ASE
- ASE 15.7 ESD#2 features support
- HANA replication from ASE and Oracle for non-SAP applications
- MPR enhancements (column hash binding), multiple scanners
- RSME enhancement (JBoss Cert.)
- Data assurance – Business Suite ASE, HANA, Oracle & IQ

Planned Innovations

Zero Data Loss (ZDL) & HANA replication

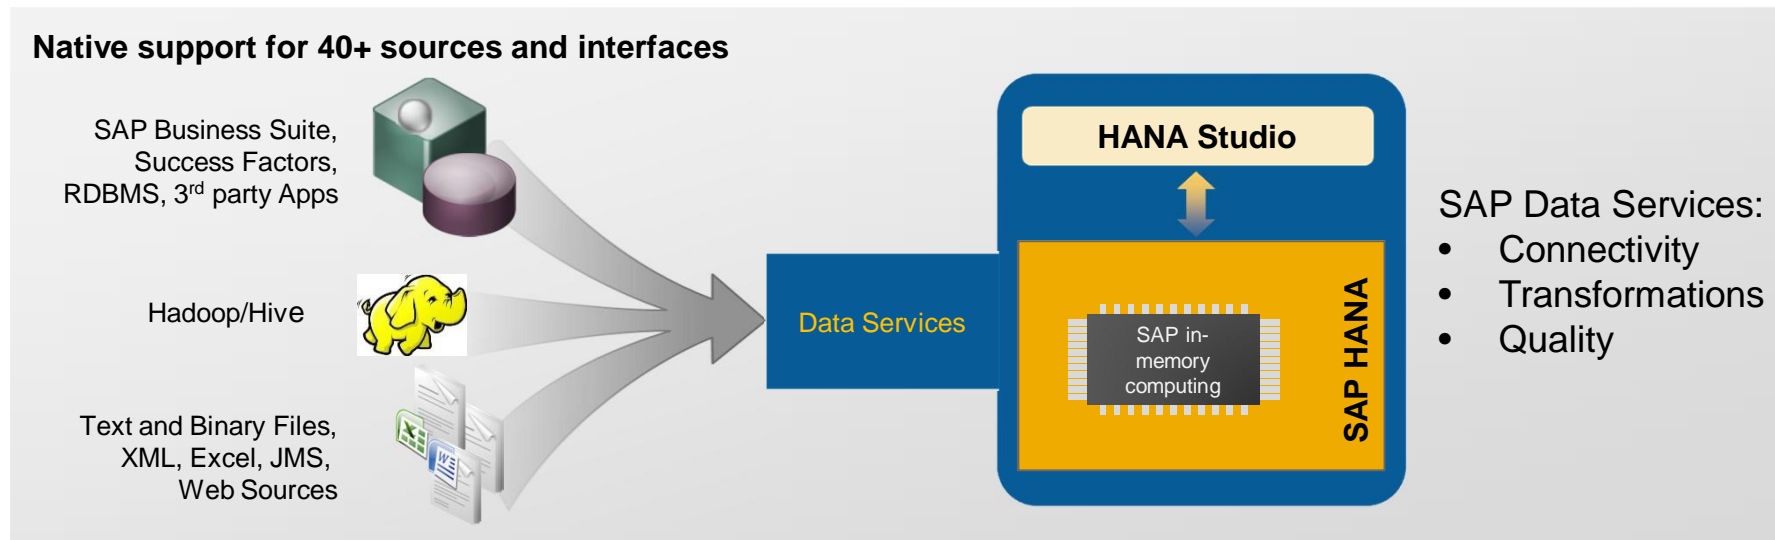

- ZDL support for HADR using synchronous replication
- HANA replication for ASE, Oracle, DB2 for SAP applications
- Report offloading for Business Suite/ASE
- Oracle to ASE migration for Business Suite (unicode to unicode only)
- Replication server performance

Future Direction

This is the current state of planning and may be changed by SAP at any time.

3. SAP Data Services 4.1

SAP Data Services (DS) is suited for Data Integration (Batch), with HANA optimized capabilities for Transforming, Cleansing* and Integrating (bulk or delta) structured and unstructured* data from many different Sources (SAP and non-SAP) to the Target (SAP HANA).

* Data Integrator (for ETL only) is included with most HANA packages. A full Data Service license is required to utilize Data Quality and Text Data Processing.

SAP Data Services: Enterprise-Wide Data Access

SAP Data Services has a long history for providing broad connectivity to databases, applications, legacy systems, file formats, ...

Databases	Applications	Files/Transport	Mainframe (with partner)	Unstructured Data
<ul style="list-style-type: none">▪ HANA<ul style="list-style-type: none">▪ Tables▪ Views▪ Oracle▪ DB2 (LUW, z-series, i-series)▪ Sybase ASE▪ Sybase IQ▪ SQL Server▪ Informix▪ MySQL▪ Teradata▪ ODBC▪ HP NeoView▪ Netezza	<ul style="list-style-type: none">▪ SAP Bus Suite<ul style="list-style-type: none">– Extractors– ABAP– BAPI– Idoc▪ SAP NW BW▪ JD Edwards▪ Oracle Apps▪ PeopleSoft▪ Siebel▪ Salesforce.com▪ SuccessFactors	<ul style="list-style-type: none">▪ Text delimited▪ Text fixed width▪ EBCDIC▪ XML▪ Cobol▪ Excel▪ HTTP▪ JMS▪ SOAP (Web Services)▪ HADOOP	<ul style="list-style-type: none">▪ ADABAS▪ ISAM▪ VSAM▪ Enscribe▪ IMS/DB▪ RMS▪ Both direct and changed data	<ul style="list-style-type: none">▪ Any text file type▪ 6 languages▪ Extended to 31 languages.▪ Expanded to PDFs, DOCs, PPTs, etc

SAP Data Services - Roadmap

Big Data

- Real-time Data Provisioning of SAP and non-SAP sources
- Harness the Power of HANA for instant data profiling and transformations pushdown
- Expanding source data connectivity through Adapter SDK and web services
- Unlock SAP ECC data asset with certification and support of over 5000 Extractors

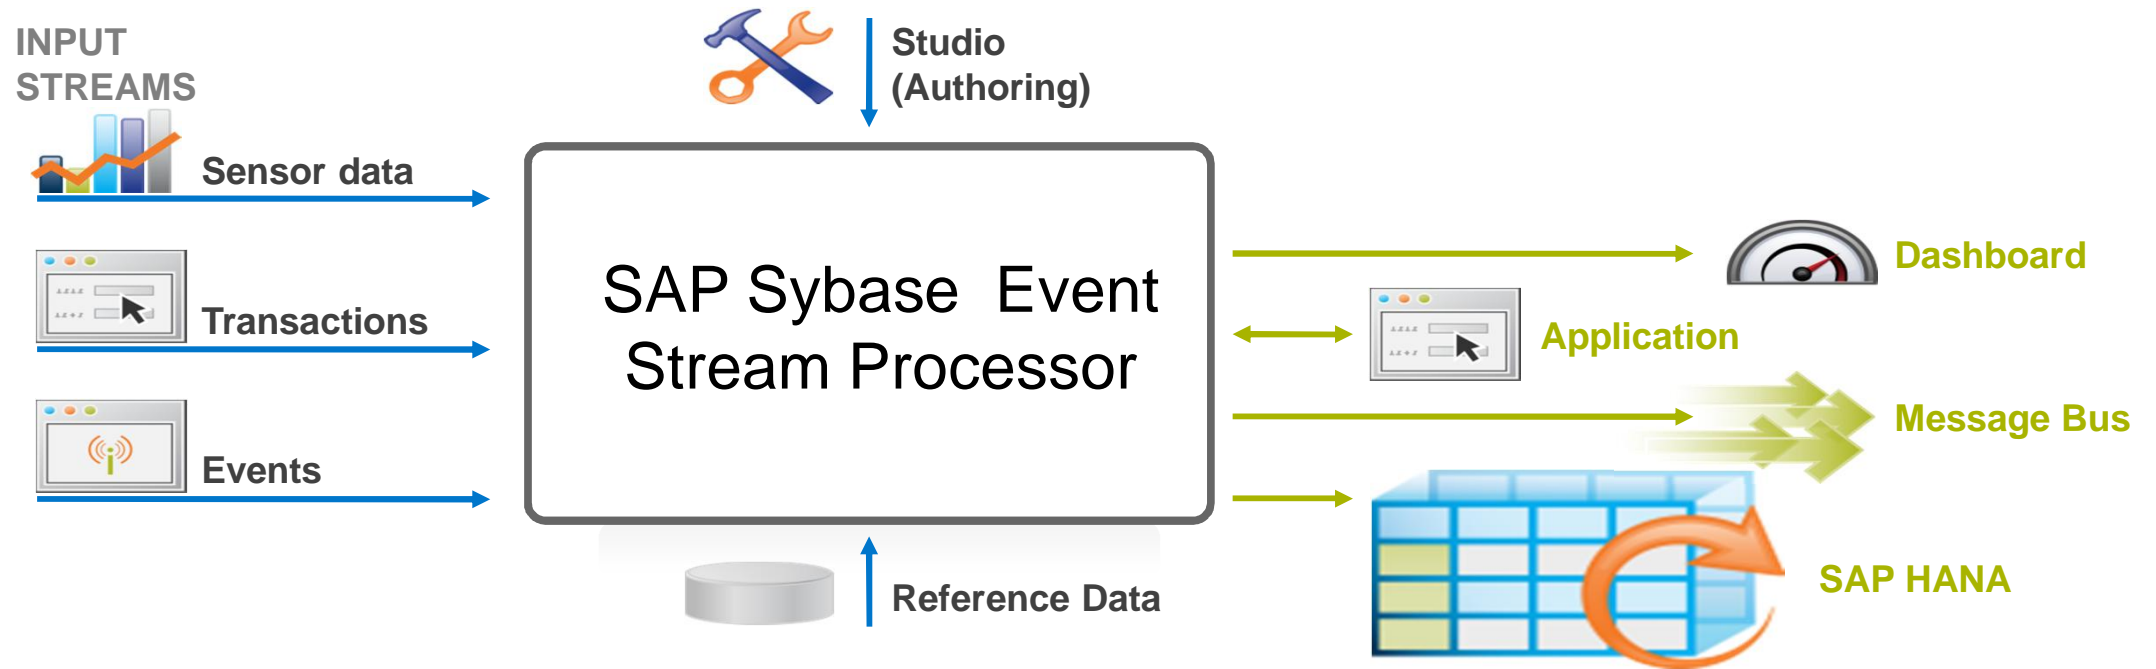

Smart and Simple

- New and intuitive user interface to support complex data replication

Enterprise Readiness

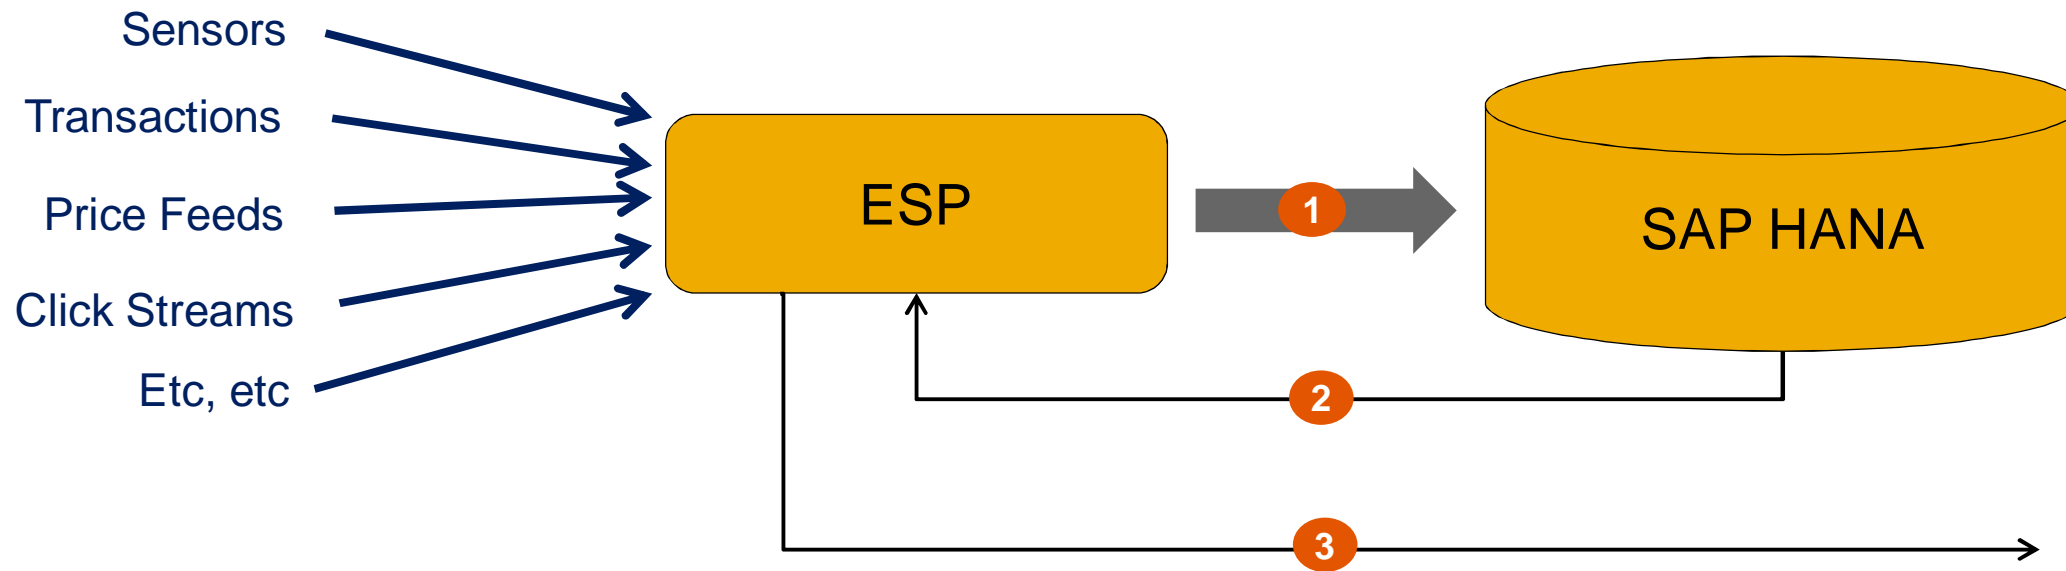

- New web-based job promotion management across Development, Test and Production Environment
- Installation and Design-time robustness

SAP Sybase Event Stream Processor

- Unlimited number of input streams
- Incoming data passes through “continuous queries” in real-time
- Output is event driven
- Scalable for extreme throughput, millisecond latency

How SAP Sybase ESP 5.1 can be used with SAP HANA

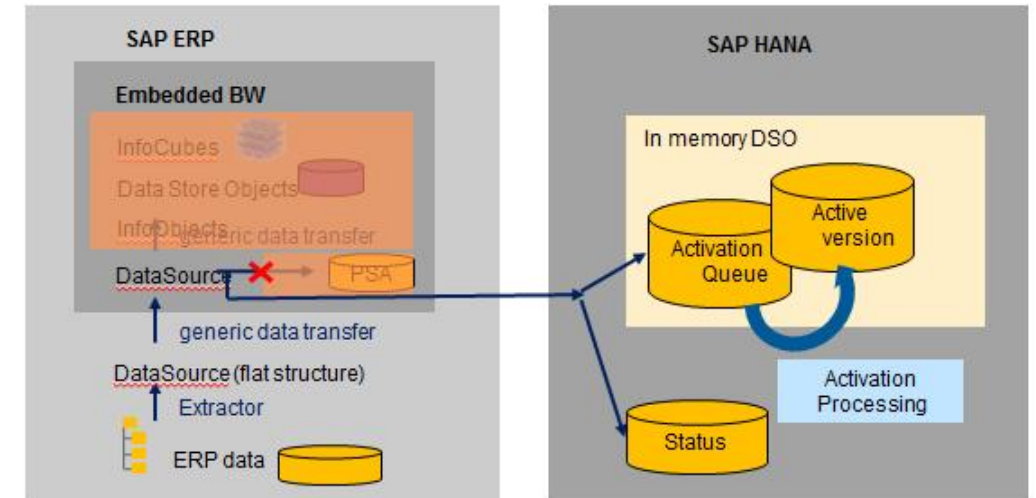

- 1 High speed smart capture: ESP can apply logic to transform, filter, aggregate, enrich incoming event streams and capture data in HANA
- 2 ESP can query HANA to provide context for processing incoming events
- 3 ESP publishes alerts or triggers response process

Other Data Provisioning - Options

1. SAP HANA Direct Extractor Connection (DXC)

SAP HANA Direct Extractor Connection (DXC) is available as a simple option in batch mode for data replication from existing SAP Data Source extractors (SAP Business Suite) to Target (SAP HANA) for stand alone data mart scenarios.

2. SAP Sybase SQL Anywhere 16 (Data Synchronization- Mobilink)

SAP Sybase SQL Anywhere is a comprehensive suite of solutions which provides data management, synchronization and data exchange technologies to enable the rapid development and deployment of database-powered applications in remote and mobile environments.

3rd Party Integration – SAP HANA Certification

- SAP Partners can enroll into SAP HANA Certification Program to integrate their ETL tools with SAP HANA for data loading use case scenarios.
- Only **JDBC** and **ODBC** interfaces are currently opened to certify with in the certification program
- Partners can initiate the discussions through their SAP partner manger
- SAP HANA PM team and SAP ICC team will provide additional details about the certification program requirements and the costs associated with the certification

For More Information, contact: prasad.illapani@sap.com

Interface	Environment	API Description	Version
JDBC	Java	Java Community Process (JCP)	3.0; 4.0
ODBC	C/C++	SQL Standard (SQL/CLI), Microsoft	3.0, 3.51

Demo

Key Takeaways

- **Real Time Data Platform - Overview**
- **Data Provisioning options with SAP HANA**
- **3rd Party Integration Tool Certification wth SAP HANA**
